

A Complete Listing of the Claims:

23. (Previously Presented) A method of feeding aquatic animals in fresh or sea water comprising adding to the fresh or sea water flaked fish feed having individual flaked bodies, uniform in size and shape and having a water content of from 1-30% and a variable thickness from 10-350 microns.

24. (Previously Presented). The method of claim 23, wherein the aquatic animals are fish, shrimp or invertebrates.

25. (Previously Presented). The method of claim 23, wherein the flaked bodies have a diameter of from 1 to 100 mm.

26. (Previously Presented). The method of claim 23, wherein the flaked bodies contain temperature-sensitive substances.

27. (Previously Presented). The method of claim 26, wherein the temperature-sensitive substances are selected from odoriferous and flavoring materials, coloring materials, enzymes, promoters, probiotics, vitamins, color strengtheners, and mixtures thereof.

28. (Previously Presented). The method of claim 27, wherein the probiotics are living bacteria or yeasts.

29. (Previously Presented). The method of claim 27, wherein the promoters are growth promoters, fertility promoters, or mixtures thereof.

30. (Previously Presented). The method of claim 27, wherein the flavoring material is a sugar.
